

PINE LILY CHAPTER
FLORIDA NATIVE PLANT SOCIETY

March 2011
Volume 5, Issue 3

The purpose of the Florida Native Plant Society is to promote the preservation, conservation, and restoration of the native plants and native plant communities of Florida.

BOARD OF DIRECTORS:

President:

Jenny Welch.....mwelch@cfl.rr.com

1st Vice President:

Mark Johnson
.....mjohnson@ecotonelanddesign.com

Secretary:

..... **Apply now**

Treasurer:

Amy Johnsonartmji@embarq.com

Chapter Rep:

..... **Apply now**

Membership:

Susan Parentsparent20@yahoo.com

Publicity/Newsletter:

Loret.....PinelilyFNPS@aol.com

**Meeting is Thursday
March 17th 6:30 p.m.**

First United Methodist Church
101 W. Dakin Avenue, Kissimmee

New/Renewing Members

None this month

Why not ask a friend to join!

The Lily Pad

Conference Silent Auction

The conference committee is seeking items for the Silent Auction. Check with your local businesses to see what they would be willing to donate (dinner for two, gift basket or similar) or make a donation yourself. They will get free promotion of their business with a small sign at the auction table noting they provided the donation. You can bring items to the March or April meeting. Kay (kay@americanbuilders.com) should be contacted so she can get the item's location spot saved.

March Program

Our speaker this month will be Stacia Hetrick talking aquatic plants. Stacia is IFAS Extension Faculty, Osceola County located in Osceola Heritage Park.

Have you registered or volunteered for the 2011 conference yet?

Florida Native Plant Society Landscape Awards Program

Application Deadline: Friday, March 18, 2011

2011 Award recipients will be honored at the Florida Native Plant Society's annual conference, held at the Sheraton Orlando North in Maitland on Saturday, May 21, 2011. Award winners will receive complimentary conference registration on Saturday. www.fnps.org/pages/conference

MINIMUM CRITERIA:

- 1) 75 percent Florida native plant species
- 2) Minimum 2-year grow-in period before submittal
- 3) No plants listed on the Florida Exotic Pest Plant Council's List of Invasive Plant Species, Category I or II, within the project site. www.fleppc.org

Applications available at:

“One of the most delightful things about a garden is the anticipation it provides.”

— W.E. Johns, *The Passing Show*

Necessary Cleanup in the Garden

by Loret
(originally published at beautifulwildlifegarden.com)

Does evil lurk in your wildlife garden? It may if you don't tend to your pet waste. Not the most pleasant subject, but one that needs to be talked about, nonetheless. A lot of people think of pet waste as "fertilizer" but while it is rich in nutrients, it is also rich in

things that just don't belong in your garden. The difference between dogs and cats and cows and horses are that our pets eat meat whereas livestock are primarily herbivores so their manure doesn't usually harbor potential problems that can be found in the waste of meat eaters.

From a brochure produced by Island County in Washington State:

"Dog and cat feces can transmit giardia, bacterial infections including salmonella, and hookworms that cause skin sores in humans. Dog feces often contain roundworms; the larvae from roundworms can travel through the human body and ultimately damage the brain or eyes. Cat feces can carry toxoplasmosis, a disease that can cause brain damage in unborn babies."

Do you really want to leave this potential "bomb" laying around in your yard? I am meticulous about cleaning up after my three dogs. I "scout" the yard at least once a day, often two or three times. The faster you pick up after your pet, the better your chances

are at avoiding potential infections. I also make use of this time to visit my garden and snap photographs of the wildlife within.

Certain scarab beetles sneak up from under the soil and pull down a ball of poop into their tunnels as a means to feed their larva. These guys are called "ball rollers" and they don't discriminate between pet waste and usable manure.

That means that potential infection is being dragged underground where the overly-rich nutrients can filter into the soil and perhaps leach out into waterways where it can cause algae blooms that will affect fish. These beetles were considered sacred to ancient Egyptians because they seemed to emerge from nowhere and the apparent "self creation" resembled the Sun God Ra who created himself out of nothing. It served as a symbol of regeneration, renewal and resurrection.

Forest Service Releases Proposed Planning Rule

by Mark Johnson

On February 14, 2011, the U.S. Forest Service released a proposed planning rule for the national forest system. If you would like to comment on it, you may check it out at <http://www.fs.usda.gov/planningrule>. You can give your own recommendations during the 90-day public comment period. Information on how to submit comments is available at <http://www.fs.usda.gov/goto/planningrule/HowToComment>.

You can also stay engaged over the coming months through any of the following:

- Attend one of our public forums to learn more about the proposed rule. Information on these public meetings is available at <http://www.fs.usda.gov/goto/planningrule/forums>.
- Submit written comments at <http://www.govcomments.com/>. Comments are due by May 16, 2011.
- Check back often to the Planning Rule website at <http://www.fs.usda.gov/goto/planningrule> for the latest information.
- Discuss the proposed rule informally with other interested members of the public on the Planning Rule blog at <http://planningrule.blogs.usda.gov/>.
- Sign up for the Planning Rule Listserv to keep informed on progress and opportunities to participate along the way. If you haven't already, please sign up at <http://www.fs.fed.us/news/pr-listserv-subscribe.html>.
- Follow the Forest Service on Twitter at <http://twitter.com/forestservice>.

Upcoming

April - Terri Peitroburgo
Subject: Paw Paws

May - No meeting. See you at the conference!

June - Liz Block
Subject: Ecological concepts for Developing Your Native Garden

Cleanup

Continued from page 2

Ignoring waste that remains above ground can allow it to be washed into storm sewers where it can ultimately wind up in our lakes and streams. Now, if you live in Florida where we get our water from the underground aquifer, YUK!

You can't control how far the dung beetle builds the tunnel so who's to say he isn't gathering his "goodies" and pulling it over toward a different section of your garden. As can be seen in the top photo, they fly so as they move around above ground, they can potentially bring infectious waste with them to an edible part of your landscape. Don't take a chance.

The best means of disposal is to bag it immediately and toss it in the trash. Landfills are lined and monitored and offer the easiest and best means of protecting your garden.

Species Spotlight

Proserpinaca pectinata (Combleaf mermaidweed)

by Loret

Photo © 2011 Loret

This small, emersed plant has a delicate, lacy look and is native to the South and Eastern US. It can survive above the water line when ponds recede and still grow well. It has tiny almost invisible pale yellow flowers tinged with pink and the fruits are 3-angled nutlets which are easily seen on the stem.

It is a member of the Water Milfoil family (*Haloragaceae*).

It can be used in aquariums, as well as ponds and lakes. Invertebrates and fish use the trailing leaves and stems for food and shelter. Waterfowl use the seeds as a food source.

It is threatened or endangered in much of its northern range.
