

Butterfly Gardening for the South, by Geyata Ajilvsgi. 1991. 360 pp. \$34.95.

Here is the complete reference for Southern gardeners who want to attract butterflies to their home. It covers butterfly lifestyles, feeding habits, flying habits, and types of caterpillars and their enemies. With more than 200 color photos, this gardening book has chapters on seed and plant sources, landscape plants, butterfly photography, and much more. You'll find how easy it is to cultivate these "flowers of the air". In addition to describing more than 50 butterflies in detail, there are sections on larval food plants and nectar food plants. Even though it covers from Texas to Tennessee to Florida, it lists many of our Florida native plants.
