For Your Information

All date and seasonal references are applicable to the eastern panhandle of Hernando County where the plants portrayed in this presentation grow, and this manual was created. This area happens to be a cold spot in central Florida due to the Brooksville Ridge and approximates a Hardiness Zone of 8a or 8b, average annual low temperatures ranging between 10 and 20 °F.

Please note that any reference to medicinal or culinary use of plants or plant parts should in no way be considered an endorsement by the Florida Native Plant Society of any sort of experimentation or consumptive use.

Please do not attempt to rescue any native plants without first reviewing the FNPS Policy on Transplanting Native Plants.

Tropical Sage
Salvia coccinea
Blood Sage, tropical sage, scarlet sage, salvia, rosy sage, Texas sage

Salvia (SAL - vee - uh)

Derived from the Latin ‘salvare’ - referring to helping, saving, or healing. In ancient times and the middle ages, various Sage were used for a myriad of medicinal purposes. From teas to compresses, its natural antiseptic qualities were used for ailments ranging from tooth ache to snake bite, to hot flashes. It was to the ancients what aspirin has become for modern man

coccinea (kok - SIN - ee - uh)

Latin for red or scarlet
Biological and Genetic Relationships

**Salvia coccinea** P.J. Buchoz ex Etlinger - blood sage

*Salvia* L. - sage

- **Lamiaceae** (mint family)
  - Verbenaceae (verbena family)
  - Lentibulariaceae (bladderwort family)
  - Orobanchaceae (broomrape family)
  - Bignoniaceae (trumpet creeper family)
  - Scrophulariaceae (figwort family)
  - Calceolariaceae (slipper flowers)
  - Acanthaceae (acanthus family)
  - Gesneriaceae (gesneriad family)

- **Oleaceae** (olive family)

- Gunneraceae

Core Eudicots
- Ranunculales
- Proteales
- Sabia
- Trochodendraceae
- Buxaceae
- Buxales
- Didymelidales
There is still more to go, follow this link to explore more of the University of Arizona’s Tree of Life.
• The United States Department of Agriculture, NRCS, lists a total of 95 species of the genus *Salvia* L. throughout the U.S.

• The Atlas of Florida Vascular Plants identifies 10 species occurring in Florida, 8 of which are native.

University of Florida Herbarium
FLAS 210751  Alachua Co., 11/13/2002
Species Distribution in the United States

Scarlet Sage, native to North America, occurs primarily in the southeastern portion of the United States. From southeastern Texas to the coastal counties of South Carolina. It is believed to have originated in Pre-Columbian Mexico, migrating to the southeast prior to European colonization.

(For specific distribution within any of the shaded areas go to the USDA link provided on the reference page, and click the shaded area of interest.)
Species Distribution in Florida

- A perennial wildflower (although considered annual in colder areas), or subshrub, *Salvia coccinea* is vouchered in approximately thirty-five Florida counties.

- Blood Sage is found in a variety of habitats preferring moist, sandy but rich soil.

(*vouchered – indicates that a fully documented dried specimen has been deposited in an approved herbarium*)
Growing Conditions

- Full sun to partial shade

- Scarlet Sage prefers well-drained sandy to rich soil and is somewhat salt tolerant

- Acid to slightly alkaline soil—5.5 to 7.5 pH

- Fairly good drought tolerance

- Hardiness: USDA Zone 7b: to −14.9 °C (5 °F)
  to USDA Zone 10b: above 1.7 °C (35 °F)

- Flowering and seed production spring to first frost

- Height: 18-36 inch (36-90 cm)
This sometimes annual, sometimes perennial first emerges between March and May, distinguished by its spade, or deltoid shaped leaves with crenate edges.

Leaves have long petioles (leaf stems) opposite each other on a square primary stem. The leaves seem to grow smaller as this subshrub grows larger.
Salvia coccinea has a very shallow and diffuse, fibrous root system providing minimal anchorage for the plant. A brisk windstorm can leave many a plant inclined or leaning against it’s neighbor.
As the plant matures, the flower clusters start to develop.
Scarlet Sage begins to bloom in spring and continues through till first frost, attracting butterflies, hummingbirds, and bumblebees to its tubular flowers. A prolific self-seeder, *Salvia coccinea* can quickly fill a flower bed if not monitored and thinned out when necessary.
Seed Collection & Propagation

Tropical Sage is a prolific self-seeder. Bagging the flowering head of its stems should be effective in capturing the seeds.

Due to *Salvia coccinea*’s propensity to reseed readily, established plantings will rejuvenate through self-seeding, sometimes needing to be cut back.
